

To Parents of Children in Year 5.

Dear Parents

This term, we will be delivering lessons on growing, body changes and puberty as part of our Year 5 Science lessons.

Workshops run by our Year 5 and 6 teachers will take place in the week beginning 4th July 2022 which will then be followed up during normal science lessons in class. There will be time for the girls and boys to discuss body changes separately and also together during the unit of work.

This science unit covers the following objective, taken directly from the National Curriculum:

Animals, including humans:

Pupils should be taught to describe the changes as humans develop to old age

If there is any aspect of this programme you would care to discuss, please do not hesitate to contact us at the school; an example of the resources used in this unit of work can be viewed on request.

Yours sincerely,

Year 6 and Year 5 team
